Introduction

In this pricing schedule you will find our prices for the delivery of electricity distribution lines services effective as at 1 April 2019 and 1 April 2018.

What are Delivery Charges?

The term 'delivery charge' describes the total price we charge to transport electricity from the national grid to consumer's homes and businesses.

Delivery prices include recovery of:

- (i) our costs to provide electricity distribution services,
- (ii) costs such as rates and levies that are passed through to us, and
- (iii) Transpower's transmission charges.

Our delivery charges are shown at Appendix A.

What are Unbundled lines charges?

Unbundled lines charges show the component prices that make up the delivery charges. At Appendix B you will find the delivery charges broken into:

- (i) Distribution— our costs to provide electricity distribution services,
- (ii) Recovery of Pass Through Costs— costs such as rates and regulator levies that are passed through to us, and
- (iv) Transmission— Transpower's transmission charges.

What are the loss factors?

Electricity is lost when it is transported. We measure what is lost through our distribution lines by applying loss factors.

The following loss factors are applied by us:

- 33kV dedicated - 1.02 (or 2%)
- 11kV dedicated - 1.05 (or 5%)
- 400V dedicated - 1.07 (or 7%)

Please note that the loss percentage reported under the information disclosure requirements, at schedule 9e(ii), for the year ended 31 March 2018 was 3.8%.
